balanced**
midgard, 1950s

**spring-
balanced**
midgard, 1950s

table

in the 1950s midgard took the parallelogram arm design with spring tension to perfection.

the spring-balanced luminaire works as an individually adjustable light source: thanks to the moveable two-arm solution, whose mechanism is directly derived from the human arm, and the freely positionable reflector, the luminaire directs the light exactly where it is needed - a solution deeply rooted in the midgard philosophy.

produced until today on original tools in germany.

dimension
500 / 400

available in black or white

two fixture choices:
freestanding or clamping

manual switch on dome

black version / black textile cable,
white version / black textile cable,
1.5m, schuko-plug

we recommend philips e27 retrofit
LED with 2700-3500k and between
6 and 10w (equals 40-60w)

do not use classic or halogen
light bulbs with more than 60w

220-240v ~ 50/60hz
appliance class: I

optionally available with
swiss or uk plug

**available in black or white.
other colours on request.**

measurements in mm

clamp

desktop thickness
min 20 mm / max 53 mm
